

## Press release

### **Swiss production of the P320 supports the industrial base of national defense**

*Neuhausen am Rheinfall, 20.03.2026* – SIG SAUER is proud to produce the P320 in Switzerland to support the Swiss Armed Forces contract. The SIG SAUER P320 is a safe and globally proven pistol, consistently meeting and exceeding all safety and performance requirements for military end users worldwide.

The Armasuisse contract allows SIG SAUER to further expand our longstanding weapons production facility in Switzerland and support in country production for the Swiss Army - ensuring a secure Swiss supply of weapons and ammunition. To support Swiss industrialization, SIG SAUER completed a technology transfer for the P320 – the world’s most widely fielded pistol – broadening Switzerland’s defense industrial base. SIG SAUER fully supports the Swiss Army's strategy of strengthening the domestic industrial base and the expansion of weapons production in Switzerland; we are engaged with numerous Swiss companies to provide services and component parts to support P320 production and promote significant job creation.

SIG SAUER designed the P320 from the ground up with the input of military personnel and law enforcement officers. SIG SAUER continually conducts assessments and demonstrations with military users to gather feedback and input to best serve the performance and ergonomic features of the platform.

The P320 is widely used internationally and has proven itself to be an accurate, robust and reliable pistol under the toughest real-world conditions as demonstrated through many military testing protocols and competitive procurements.

The Armasuisse competitive selection process required extensive technical testing and field trials centered on user feedback with a comprehensive focus on safe, reliable operation. SIG SAUER stands behind Armasuisse’s rigorous selection process, which involved multiple criteria and considerations. Armasuisse’s highly competitive process sought a pistol with modern ergonomics, modularity, and the ability to reliably meet a 30+ year service life and operational support demands aligning global militaries. The P320’s precision and reliability make the platform extremely well suited for the dynamic and unique needs of the Swiss Armed Forces and their traditional citizen-soldiers.

The P320 consistently meets and exceeds the stringent expectations of armed forces around the world, including the militaries of the United States, Australia, Denmark and Canada. SIG SAUER continues to be proud of SIG SAUER AG for this incredible achievement and honored for the opportunity to expand our longstanding manufacturing footprint in Switzerland and meet the incredible demands of the Swiss Armed Forces.
